8º Reunião

October 24, 2019

1   JSON DATA

Web server:
 Added pre-processing so server renders views faster.

Data exploration:
 Removed Distribution from every attribute, added dataset to all attributes.

Feature rank:
 Rearranged JSON structure.

```
feature_ranking =
{
    "(data type)":{
        "(score function)":{
            "(class_label)":[
                {
                    "column_name": (value),
                    "column_value": (value)
                },
                {
                    "column_name": (value),
                    "column_value": (value)
                },
                ...
            ]
        }
    }
}
```
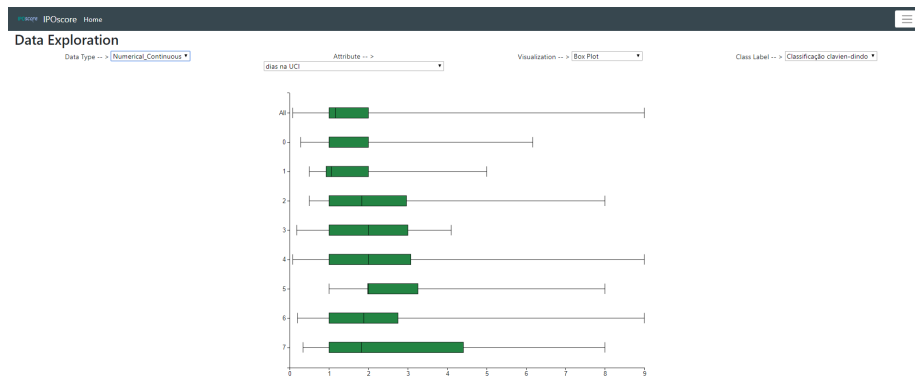

2 New Visualizations and components
